

Question 1: Grade Calculator

Create a PHP program with an HTML form where a user can input their total marks (out of 100). Write PHP code that calculates their grade based on the following criteria:

- Marks ≥ 90 : Grade A
- Marks ≥ 75 and < 90 : Grade B
- Marks ≥ 50 and < 75 : Grade C
- Marks < 50 : Grade F

Display the user's marks, grade, and a motivational message based on the grade.

Grade Calculator Enter Your Marks (out of 100): 60 Calculate Grade Clear	Grade Results Marks: 60 Grade: C Keep working hard to improve. Calculate Another Grade
--	---

Question 2: Age Group Classifier

Create a PHP program with an HTML form where a user can input their age. Write PHP code to classify the user's age group as follows:

- Age < 13 : Child
- Age ≥ 13 and < 20 : Teenager
- Age ≥ 20 and < 60 : Adult
- Age ≥ 60 : Senior Citizen

Display the user's age and their age group.

Age Group Classifier Enter Your Age: 56 Check Age Group Clear	Age Group Results Age: 56 Age Group: Adult Check Another Age
---	--

Question 03

Calculate BMI

BMI Calculator		BMI Results
Weight (kg):	23	Weight: 23 kg
Height (cm):	56	Height: 56 cm
Calculate BMI Clear		BMI: 73.3
		Category: Obesity
		Calculate Another BMI
