

Tutorial 01

CS105.3 Database Management Systems

1. What is Data?
2. What are the data you can take from the diagrams below?

3. What is information?

4. Differentiate the data and information.

- ❖ Temperature readings were recorded at various locations throughout the city. At 8:00 AM, the temperature in the downtown area was 20 degrees Celsius, while in the suburbs, it was 18 degrees Celsius. By 2:00 PM, the downtown temperature had risen to 25 degrees Celsius, whereas in the suburbs, it had reached 22 degrees Celsius.
- ❖ John's bank account balance was \$1,000 on January 1st. Over the course of the month, he received a \$500 paycheck, paid a \$200 bill, and withdrew \$300 in cash. On January 31st, his bank account balance was \$1,000.
- ❖ A manufacturing company collects data on the number of defective products produced each day over a month. The data shows that on January 1st, 10 defective products were identified, while on January 31st, only 2 defective products were found.

- ❖ An online retail store records data on customer satisfaction ratings for a particular product over a year. The data indicates that the satisfaction rating increased from 3 stars in January to 4.5 stars in December.
- ❖ A research team conducts a study on student performance in a mathematics class over the course of a semester. They collect data on the scores achieved by each student in weekly quizzes. For example, Student A scored 80% on the first quiz, 75% on the second quiz, and so on.
